

**Table 1:** Columns for DP\_HI.csv.

Column	Unit	Description
name		Galaxy name
RA	deg	Right ascension (J2000)
DEC	deg	Declination (J2000)
dist_best	Mpc	Hubble-flow corrected distance
vhelio	km/s	Heliocentric velocity
HIflux	Jy km/s	Integrated HI flux
HIfluxerr	Jy km/s	Uncertainty on HI flux (HIfluxerr=0 for upper limits)
MHI	Msun	HI mass
MHIerr	Msun	Uncertainty on HI mass
logMHI		$\log(M_{\text{HI}}/\text{M}_\odot)$
logMHIerr		Uncertainty on $\log M_{\text{HI}}$
HI_ref		Reference for the HI flux
Flag		Flag to indicate: (0) well measured sources (1) upper limits (ignored in our study) (2) confused sources (ignored in our study) (3) sources for which the HI flux was corrected (Wang et al. 2014) to account for HI outside of the ALFALFA aperture.

## HI masses for DustPedia

To obtain HI masses for the DustPedia sample we have performed a literature compilation (see also Casasola et al., 2018, *in prep.*). The columns for DP\_HI.csv are described in Table 1. Integrated HI fluxes were found for 764 out of the 875 DustPedia galaxies. The various references used in this compilation are listed in Table 2. When multiple references were available, preference was given to the measurements with the smallest uncertainty. There are 67 ALFALFA sources for which the DustPedia aperture is larger than 5' and there might thus be significant HI flux outside of the ALFALFA aperture (flag=3). The HI flux for these sources was therefore corrected to account for HI outside of the ALFALFA aperture using the HI-profile from Wang et al. (2014). HI fluxes were converted to  $M_{\text{HI}}$  using:

$$M_{\text{HI}} = 2.36 \times 10^5 f_{\text{HI}} D^2 \quad (1)$$

Where  $f_{\text{HI}}$  is the compiled HI flux and  $D$  is the best distance measure from Clark et al. (2018) in Mpc. See De Vis et al. (2019) for more details.

**Table 2:** References used in the compilation of HI fluxes.
